

# Live Briefs by MT Newswires

## Product Overview

Operating around the clock, with up-to-the-minute updates, MT Newswires' expanding global network of financial journalists and economists produces a multi-asset class news service for a diverse array of industry professionals, as well as retail and institutional investors alike.

- More than 130 categories of original, ticker-tagged and meta-coded news; including comprehensive, intra-day coverage of global economics, forex, insider trading, emerging trends, and more.
  - Full day, multi-asset class coverage of developed capital markets in North America, Europe & Asia.
  - Industry-leading analysis of corporate news, events, and related price impact.
  - Detailed broad market and sector summaries before, during and after regular market hours every business day.
  - Top News feed (with optional images) to highlight the biggest stories driving global capital markets, businesses, and economies.
- 

## Publisher

With a history of serving the largest and most recognized market data, research and trading applications in North America and Europe, MT Newswires is a recognized leader in original and unbiased business and financial news.

---

## Delivery

Nasdaq Cloud Data Service (NCDS) provides a modern and efficient method of delivery for realtime exchange data and other financial information. Data is made available through a suite of APIs, allowing for effortless integration of data from disparate sources, and a dramatic reduction in time to market for customer-designed applications. The API is highly scalable, and robust enough to support the delivery of real-time exchange data.

This repository provides an SDK for developing applications to access the NCDS API. While the SDK is open source, connecting to the API does require credentials, which are provided by Nasdaq during an on-boarding process.

For more information please use the link- <https://github.com/Nasdaq/CloudDataService>

---

## Message Formats

### News Message

The news story is a well-formed message. Each message represents a single news story.

### Details

Field	Name	Type	Description
